List of Journals and other Serial Sources

Introduction

Input to the INSPEC database is prepared from the world's literature in the fields of physics, electrical engineering, electronics, computers and control. The publications scanned include journals, conference proceedings, books, reports and theses. The INSPEC *List of Journals and other Serial Sources* provides details of all regular journals , followed by a similar listing of all other serial publications which are regularly scanned for the database, e.g. series of monographs, annual reviews, report series etc.

Selection

Not all articles from the listed publications are abstracted. Selection depends on whether the individual article is of sufficient quality and falls within the INSPEC subject scope. However, a number of journals are central to the INSPEC subject field and of a quality such that, virtually without exception, all articles are abstracted. These journals are indicated in the list by the symbol †.

Availability of Listed Publications

INSPEC does not itself supply copies of the original articles. However, the main entry for each serial generally contains sufficient information about the publisher for an order to be made. Otherwise, to obtain copies of articles abstracted in the INSPEC information services consult your organisation's library, or your other local and national lending libraries. Should you still have difficulty in obtaining the material please consult the:

Key to examples

1. ***Abbreviated title and country of publication.*** The form of abbreviation used in the title conforms to ISO 4-1972(E) International code for the abbreviation of titles of periodicals and ISO 833-1974(E) International list of periodical title word abbreviations.

2. ***First issue covered by INSPEC.*** Details are given of the first issue covered. Records are only available for journals added since 1968. For journals covered since 1968 or earlier the entry will therefore be (1968 –)

3. ***Coden*** — this is a five-character unique code intended to identify the title for computer handling of serial titles. A sixth-character check digit has been added. The source for Coden is:

   International Coden Service
   c/o Chemical Abstracts Service
   The Ohio State University
   Columbus Ohio 43210
   USA

4. ***ISSN*** — the ISSN (International Standard Serial Number) also provides a unique identification for serial titles. ISSN are assigned by International Serials Data System (ISDS) national centres which are coordinated by the ISDS International Centre in Paris. The format of ISSN complies with ISO 3297-1975E *Documentation — International Standard Serial Numbering (ISSN).*

5. ***Abstracted completely***

6. ***Full title***

7. ***Publisher's name and address.***

8. ***Title cross reference.*** The cross reference entries are provided to assist the user in locating titles within the list. Cross reference entries have generally been used where:
   - i) there is a foreign language form of the title
   - ii) there is an alternative form of the title
   - iii) the title begins with a generic term such as 'Bulletin', 'Journal', 'Report' etc. rather than the name of the organisation issuing the serial. In this case a cross reference is made from the name of the organisation.
   - iv) the title begins with an acronym or initialism. In this case a cross reference is provided from the expansion of the acronym to the acronym itself. Some very commonly used acronyms or initialisms, e.g. IEEE are not expanded.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database. Information is dispatched weekly on 150 mm × 100 mm (6″ × 4″) cards.

TOPICS

This is an SDI service based on standard profiles. There are over 90 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

JAPAN UPDATE

Six high-technology subjects are covered by Japan Update Services. Abstracts are provided for articles selected from over 250 Japanese journals and despatched weekly on conveniently-sized cards. This inexpensive service is designed to help engineers stay abreast of technological developments reported in the Japanese literature.
